**DETAILED ACTION**

Claims 1-36 are pending in the instant application. Acknowledgement is made of Applicant's IDS submitted 4/12/02.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-36 are rejected under 35 U.S.C. 102(b) as being anticipated by Meyer et al. (U.S. Pat. No. 5,958,902).

Meyer relates to the application of a lung surfactant to the posterior pharyngeal region prior to sleep to significantly reduce episodes of sleep disturbance resulting in apnea. It is taught that sleep apnea has been associated with sudden death (col. 1, lines 46-50). The invention may provide the lung surfactant in a convenient applicator container for easy use and storage (Abstract).

The lung surfactant can be any of those commercially available and licensed by the FDA, including artificially compounded compositions such as Exosurf®. Exosurf® contains phospholipids and a preferred surface active agent, tyloxapol (col. 4, lines 50-54). Meyer teaches that U.S. Pat. No. 4,826,821, incorporated by reference, teaches using synthetic surfactant compositions containing tyloxapol.

U.S. Pat. No. 4,826,821 (\*\*821) teaches that surface active agents such as tyloxapol should can be present in the compositions from 6-11% (\*\*821 patent, col. 6, lines 56-65).

During application of the invention of Meyer, a pressurized aerosol can, a squeeze bottle, or a pump bottle may be used. The surfactant will typically be applied through the oral cavity, but it may be delivered nasally when the subject is supine (col. 5, lines 44-50).
